Note: Numbers reflect steps in interaction while bullets align to results independent of steps

Use Case 1 (TR1, TR1.1, TR1.2, TR1.3, TR1.4, TR1.5)		
1.1	Preconditions	The user has navigated to the application URL
1.2	Main Flow	- The user is presented with a dropdown to select a specific - The dropdown Is initially NULL. - The user selects a specific
1.3	Sub-Flows	N/A
1.4	Alternative Flows	- The user switches the application to Report Centric - The user is presented with a dropdown to select a specific Report defaulted to NULL. - The user selects a specific Report
1.5	Data Formats	- Centricity – logical - Source – character
1.6	Acceptance Scenarios	- The user's selected visualization is displayed - The user's selected Report visualization is displayed. - The user may select a new from an always present UI

Use Case 2 (TR2, TR2.1, TR2.2, TR2.3, TR2.4, TR2.5)																				
1.1	Preconditions	· UC1																		
1.2	Main Flow	1. The user is displayed a network model showing the connections of the Bank's network of   and Other sources																		
1.3	Sub-Flows	N/A																		
1.4	Alternative Flows	N/A																		
1.5	Data Formats	Nodes:																		
		<table><tr><td>id</td><td>number</td><td>label</td><td>group</td><td>shape</td><td>type</td><td>title</td></tr><tr><td>Integer</td><td>character</td><td>character</td><td>character</td><td>character</td><td>list</td><td>character</td></tr></table>					id	number	label	group	shape	type	title	Integer	character	character	character	character	list	character
		id	number	label	group	shape	type	title												
Integer	character	character	character	character	list	character														

		Edges:														
		<table><tr><td>id</td><td>from</td><td>to</td><td>width</td><td>weight</td><td>Arrows.middle.enabled</td><td>Arrows.middle.scaleFactor</td></tr><tr><td>Integer</td><td>character</td><td>character</td><td>Double</td><td>Double</td><td>Logical</td><td>Double</td></tr></table>	id	from	to	width	weight	Arrows.middle.enabled	Arrows.middle.scaleFactor	Integer	character	character	Double	Double	Logical	Double
id	from	to	width	weight	Arrows.middle.enabled	Arrows.middle.scaleFactor										
Integer	character	character	Double	Double	Logical	Double										
1.6	Acceptance Scenarios	· The displayed network is accurate up to 1 hop from the source(s). · The network displays  as dark blue square nodes · The network displays  as dark blue database nodes · The network displays Other sources as brown hexagon nodes · The network displays  as yellow circle nodes · The network displays Reports as green star nodes · The network displays Reports with no data as black star nodes · The network displays   and Reports with  data red rather than their original color. · The network displays node edges darker or lighter based on usage respectively														

Use Case 3 (TR3, TR3.1, TR3.6)		
1.1	Preconditions	· UC2
1.2	Main Flow	1. The user selects a  by clicking on its node in the network
1.3	Sub-Flows	1. The user selects a  by clicking on the  s name from a dropdown presented by a UI
1.4	Alternative Flows	2. The user may deselect the  returning the network back to its original state
1.5	Data Formats	· selectedPDE – character
1.6	Acceptance Scenarios	1. The  node is highlighted. Any downstream  or Reports that use the  are highlighted. Edges connecting all highlighted nodes are highlighted. 2. The highlighting effect is reset

Use Case 4 (TR3, TR3.2, TR3.6)		
1.1	Preconditions	· UC2
1.2	Main Flow	1. The user selects a Report by clicking on its node in the network
1.3	Sub-Flows	1. The user selects a Report by clicking on the Report's name from a dropdown presented by a UI
1.4	Alternative Flows	2. The user may deselect the Report returning the network back to its original state
1.5	Data Formats	· selectedReport – character
1.6	Acceptance Scenarios	1. The Report node is highlighted. All  nodes associated with the selected Report and  nodes associated to those  are highlighted.
