Note: Numbers reflect steps in interaction while bullets align to results independent of steps

Use Case 1 (TR1, TR1.1, TR1.2, TR1.3, TR1.4, TR1.5)		
1.1	Preconditions	The user has navigated to the application URL
1.2	Main Flow	- The user is presented with a dropdown to select a specific ADS. - The dropdown Is initially NULL. - The user selects a specific ADS
1.3	Sub-Flows	N/A
1.4	Alternative Flows	- The user switches the application to Report Centric - The user is presented with a dropdown to select a specific Report defaulted to NULL. - The user selects a specific Report
1.5	Data Formats	- Centricity – logical - Source – character
1.6	Acceptance Scenarios	- The user's selected ADS visualization is displayed - The user's selected Report visualization is displayed. - The user may select a new ADS from an always present UI

Use Case 2 (TR2, TR2.1, TR2.2, TR2.3, TR2.4, TR2.5)								
1.1	Preconditions	· UC1						
1.2	Main Flow	1. The user is displayed a network model showing the connections of the Bank's network of AITs, PDEs, Reports, and Other sources						
1.3	Sub-Flows	N/A						
1.4	Alternative Flows	N/A						
1.5	Data Formats	Nodes:						
		id	number	label	group	shape	type	title
		Integer	character	character	character	character	list	character

		Edges:														
		<table><tr><td>id</td><td>from</td><td>to</td><td>width</td><td>weight</td><td>Arrows.middle.enabled</td><td>Arrows.middle.scaleFactor</td></tr><tr><td>Integer</td><td>character</td><td>character</td><td>Double</td><td>Double</td><td>Logical</td><td>Double</td></tr></table>	id	from	to	width	weight	Arrows.middle.enabled	Arrows.middle.scaleFactor	Integer	character	character	Double	Double	Logical	Double
id	from	to	width	weight	Arrows.middle.enabled	Arrows.middle.scaleFactor										
Integer	character	character	Double	Double	Logical	Double										
1.6	Acceptance Scenarios	• The displayed network is accurate up to 1 hop from the source(s). • The network displays AITs as dark blue square nodes • The network displays ADSs as dark blue database nodes • The network displays Other sources as brown hexagon nodes • The network displays PDEs as yellow circle nodes • The network displays Reports as green star nodes • The network displays Reports with no data as black star nodes • The network displays AITs, ADSs, and Reports with DART data red rather than their original color. • The network displays node edges darker or lighter based on usage respectively														

Use Case 3 (TR3, TR3.1, TR3.6)		
1.1	Preconditions	UC2
1.2	Main Flow	1. The user selects a PDE by clicking on its node in the network
1.3	Sub-Flows	1. The user selects a PDE by clicking on the PDE's name from a dropdown presented by a UI
1.4	Alternative Flows	2. The user may deselect the PDE returning the network back to its original state
1.5	Data Formats	selectedPDE – character
1.6	Acceptance Scenarios	1. The PDE node is highlighted. Any downstream AIT or Reports that use the PDE are highlighted. Edges connecting all highlighted nodes are highlighted. 2. The highlighting effect is reset

Use Case 4 (TR3, TR3.2, TR3.6)		
1.1	Preconditions	UC2
1.2	Main Flow	1. The user selects a Report by clicking on its node in the network
1.3	Sub-Flows	1. The user selects a Report by clicking on the Report's name from a dropdown presented by a UI
1.4	Alternative Flows	2. The user may deselect the Report returning the network back to its original state
1.5	Data Formats	selectedReport – character
1.6	Acceptance Scenarios	1. The Report node is highlighted. All PDE nodes associated with the selected Report and AIT nodes associated to those PDEs are highlighted.

		Edges connecting all highlighted nodes are highlighted.
		2. The highlighting effect is reset

Use Case 5 (TR3, TR3.3, TR3.6)		
1.1	Preconditions	· UC2
1.2	Main Flow	1. The user selects a Regulator by clicking on its name from a dropdown presented by the UI
1.3	Sub-Flows	N/A
1.4	Alternative Flows	2. The user may deselect the Regulator returning the network back to its original state
1.5	Data Formats	· selectedRegulator – character
1.6	Acceptance Scenarios	1. All Report nodes associated with the selected Regulator are highlighted. All PDE nodes associated with the highlighted Report nodes are highlighted. Any downstream AIT nodes from the highlighted PDEs are also highlighted. Edges connecting all highlighted nodes are highlighted. 2. The highlighting effect is reset

Use Case 6 (TR3, TR3.4, TR3.6)		
1.1	Preconditions	· UC2
1.2	Main Flow	1. The user selects an AIT by clicking on its node in the network.
1.3	Sub-Flows	1. The user selects an AIT by clicking on the AITs name from a dropdown presented by a UI
1.4	Alternative Flows	2. The user may deselect the AIT returning the network back to its original state
1.5	Data Formats	· selectedAIT – character
1.6	Acceptance Scenarios	1. All PDEs associated with the selected AIT are highlighted. The selected AIT is highlighted. Any downstream AITs are highlighted. Any Reports associated with highlighted PDEs are highlighted. Edges connecting all highlighted nodes are highlighted. 2. The highlighting effect is reset.

Use Case 7 (TR3, TR3.5, TR3.6)		
--------------------------------	--	--

1.1	Preconditions	· UC2
1.2	Main Flow	1. The user selects a Regulator by selecting its name from the dropdown in the UI 2. The user selects a Report by selecting its name from the dropdown in the UI 3. The user selects a AIT by selecting its name from the dropdown in the UI 4. The user selects a PDE by selecting its name from the dropdown in the UI.
1.3	Sub-Flows	
1.4	Alternative Flows	5. The user may click the “Reset Filters” button to reset the view 6. The user may click any blank space in the view to reset the view
1.5	Data Formats	N/A
1.6	Acceptance Scenarios	4. The flow for the specific PDE to AIT to Report is shown in the view. Edges connecting all highlighted nodes are highlighted. 5. The highlighting effect is reset. 6. The highlighting effect is reset.

Use Case 8 (TR3, TR3.7, 3.8, 3.9, 3.10)

1.1	Preconditions	· UC2
1.2	Main Flow	1. The user hovers over any Report Node 2. The user hovers over any PDE Node 3. The user hovers over any AIT/ADS Node 4. The user hovers over any Other Node
1.3	Sub-Flows	N/A
1.4	Alternative Flows	N/A
1.5	Data Formats	N/A
1.6	Acceptance Scenarios	1. Report metadata is shown along with the percentage of PDEs found in the source ADS(s) 2. PDE metadata is shown. 3. AIT/ADS meta data is shown along with the first 5 DART incident IDs are shown. 4. Other metadata is shown along with what type of source the node is

Use Case 9 (TR4, TR 4.1, TR 4.2, TR 4.3, TR 4.4)

1.1	Preconditions	· UC2
1.2	Main Flow	1. The user switches to System mode.

		- The user selects a different source. - The user switches the system back to PDE mode.
1.3	Sub-Flows	N/A
1.4	Alternative Flows	N/A
1.5	Data Formats	N/A
1.6	Acceptance Scenarios	- The existing network filters out the PDE nodes. - A new network is shown, still in System mode. - The existing network is expanded to show PDEs.

Use Case 10 (TR5, TR5.1, TR5.2)		
1.1	Preconditions	· UC2
1.2	Main Flow	1. The user selects the export button
1.3	Sub-Flows	N/A
1.4	Alternative Flows	N/A
1.5	Data Formats	N/A
1.6	Acceptance Scenarios	1. An excel file is downloaded containing the Report metadata and mapping between Report to PDE to AIT

Use Case 10 (TR5, TR5.1, TR5.2)		
1.1	Preconditions	· UC2
1.2	Main Flow	- The user filters the view on a Report with associated PDEs - The user selects the export button
1.3	Sub-Flows	N/A
1.4	Alternative Flows	N/A
1.5	Data Formats	N/A
1.6	Acceptance Scenarios	2. An excel file is downloaded containing the selected Report's metadata and the mapping between the selected Report and its associated PDEs and their associated AITs
